

Premier Wine Cask, Inc.

Innovative Rack System, LLC

Premier Wine Cask, Inc. introduces Innovative Rack System LLC, the exclusive North American supplier of this unique steel core polypropylene deep cradle rack designed for safe and secure barrel stacking and moving.

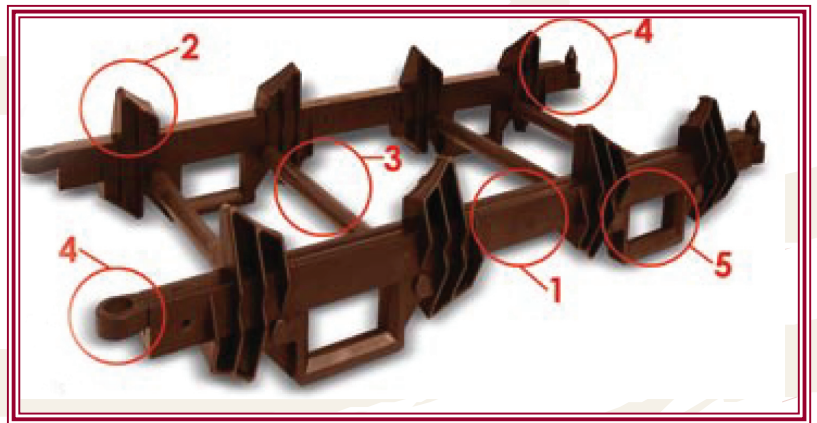

1) The rack is constructed of food grade polypropylene combined with a rugged steel core for strength and stability.

2) The deep, contoured polypropylene cradle assures stable barrels. You won't have to worry about barrels flying off when you or your cellar crew takes a corner with a forklift.

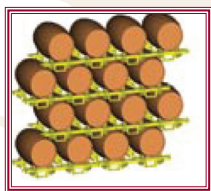

3) The interior connecting rods are hardened steel wrapped in polypropylene. Each connecting rod can be easily disassembled so the barrel racks can be conveniently stored.

4) The Innovative Rack System's portable barrel rack is just that. A system! Each rack interconnects to its neighbor so that your barrel stack has maximum stability.

5) Forklift channels make portability convenient and safe.

This new barrel rack design offers a technologically advanced version of the traditional pyramid method for safely and securely stacking barrels. Characteristics and benefits include:

- Barrels stack pyramid-style.
- Staggered stacking allows easy bung access for filling, topping and racking.
- Stacks are easily dismantled and moved by forklift, from top to bottom.
- Safely and efficiently stacks up to 6 layers high: 225L barrels stacked 6 high reach only 14.25 feet.
- Unrivaled resistance to vibration and shaking—your barrels are safer than they've ever been.
- Non-oxidative and maintenance free. Not affected by ozone, sulfur, tartaric acid, etc.
- Easy to assemble for use, and disassemble for storage. Each 2 barrel rack weighs 55 lbs.

Pricing

Polypropylene -Steel
Barrel Rack PLASBA

1-19	\$172
20-99	\$167
100-499	\$162
500-999	\$157
1,000+	\$152
